

When it comes to the safe, secure and responsible disposal of obsolete computers and redundant IT technology, you can't afford to make any mistakes.

Do you know your confidential data will be disposed of safely?

It's important to ask the right questions from the outset so that you have absolute surety that sensitive data will be fully managed.

Thinking of recycling your old IT equipment?

Or could it fall into the wrong hands?

If you think your recycled equipment is just taken away and then dumped, you need to think again!

Asking the right questions now could safeguard serious consequences in the future...

You have a responsibility to ensure your IT equipment is appropriately dealt with from start to finish. That includes knowing its final destination.

Where will your recycled equipment actually end up?

Who knows?

The Data Protection Act requires all information to be destroyed when the media on which it is stored becomes redundant. Failure to comply could result in huge fines and complicated legal issues.

There is another way...

Better think of tier 1 RECYCLING

Tier1 provides a managed, ethical and environmentally responsible disposal service for end of life computer equipment and IT technology.

Be sure your data is disposed of safely and thoroughly!

You can trust us to dispose of your equipment and data in line with WEEE Legislation, Data Protection Act and EC Environmental regulations.

Completely FREE collection and removal.

It won't cost you a penny for us to collect and remove your old IT equipment - it's all part of the service!
